Proposals to Think a Better World (II)

Overcome the crisis and the current financial income system.
A revolution in peace is possible.

a. Privatize the foreign debts of all the countries

It is essential that we understand that the current economic model generates a fictitious financial income which may not be absorbed by the actual economy (as it is) and, in turn, a virtual economy which tends to be more unstable and incontrollable as the model departs from the **ACTUAL** economy.

Privatizing foreign debts means that the capital invested and the corresponding interest (up to 3% annually) may be exchanged by shares of companies which will develop activities within such a term that the profit generated may allow the repayment of the debt.

I) What activities to develop?

1. Alternative energies – wind, solar, hydrogen, others
(In the case of ARGENTINA, 10,000 WIND GENERATORS IN THE SOUTH AND SOLAR PARKS IN THE NORTH).

2. Forestation
(In the case of ARGENTINA, 20,000,000 HECTARES, FOR EXAMPLE, FOR 45 YEARS).

3. FINANCING OF INDUSTRIAL RECONVERSION TO DIMINISH OR ELIMINATE THE POLLUTING EFFECT OF THE INDUSTRIES OR THEIR PRODUCTS.

II) What changes are made?
Papers and profits generate actual employment, and actual effects on the economy, the environment and, above all, human development in the regions.
